

# Technical WP track – Sessions 1 + 2

## Session 1

Open data search portal

The screenshot shows the panosc search portal with a search bar containing 'beam' and 50+ results. The left sidebar has filters for Type (proposal, publication), Technique, Incident Wavelength (nm), Incident Photon Energy (eV), Chemical Formula, and Temperature (K). The main results area lists three items with their IDs and titles: 'High resolution, high throughput pink beam far field Ptychography', 'Investigation of beam damage on Ferroelectric thin films', and 'Deciphering complex mineral paragenesis at clay-concrete interface'.

## Session 2
