

SOLARIS

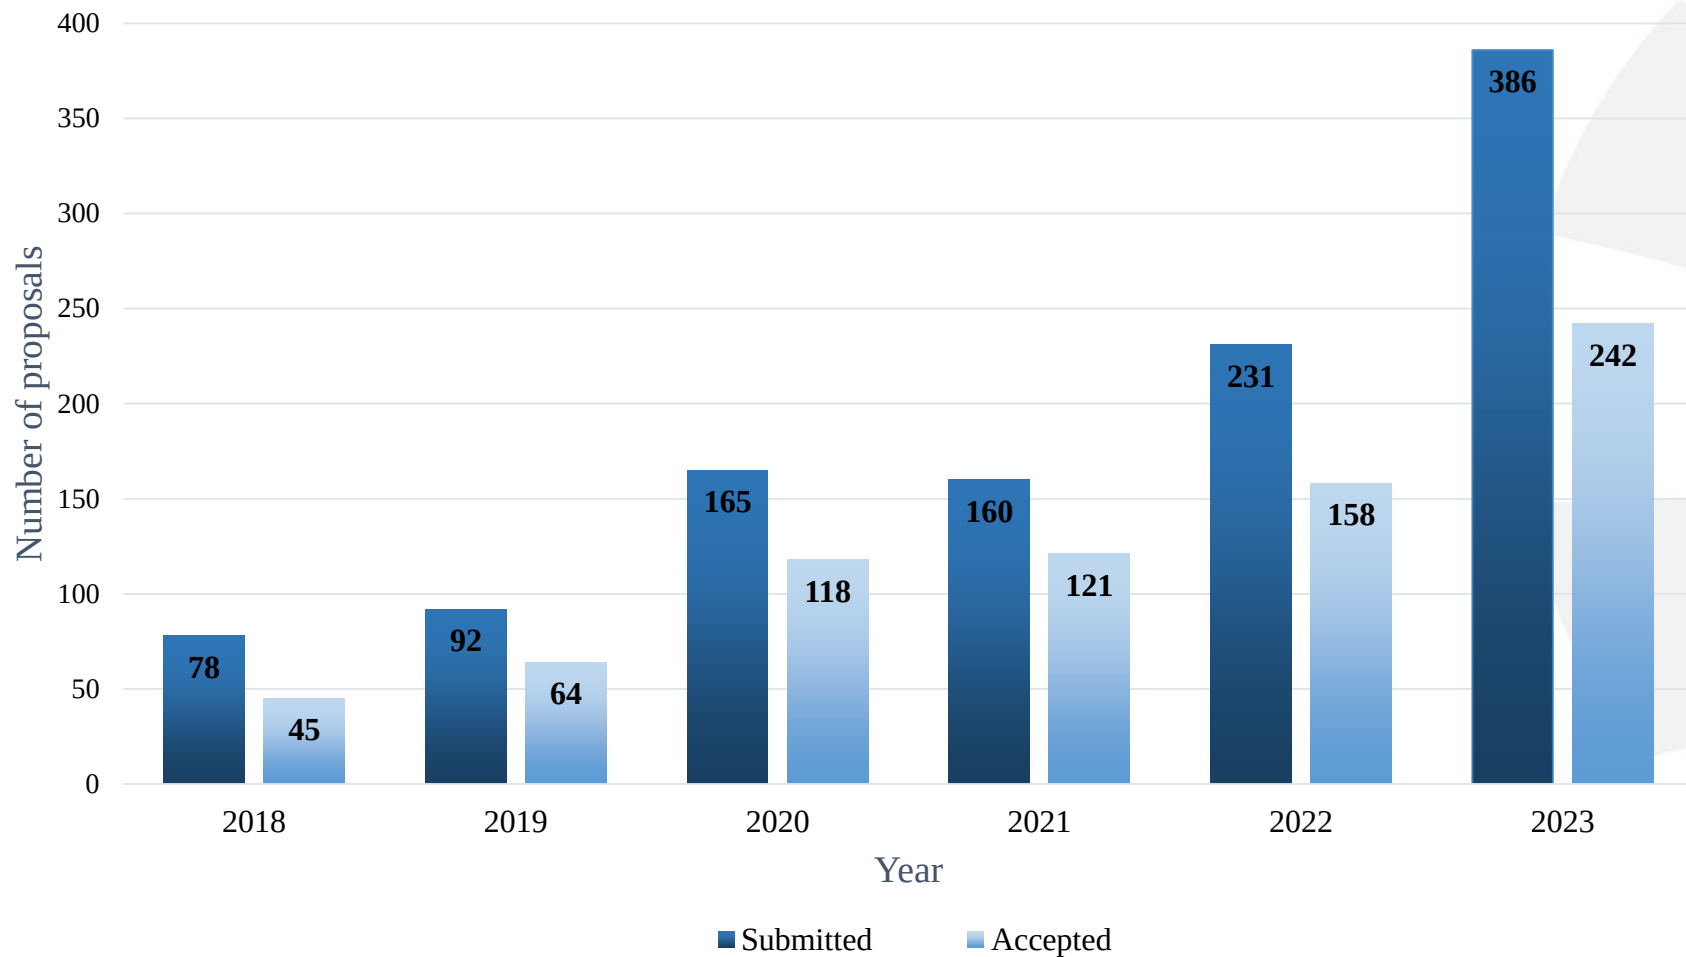

NATIONAL SYNCHROTRON
RADIATION CENTRE

- Only synchrotron in East and Central Europe
- Opened in 2015, first users in 2018
- 6 Beamlines, 1 cryo-electron microscope managed by the User Office
- 1 cryo-electron microscope available for industrial users
- Standard, Long term and Rapid Access proposals

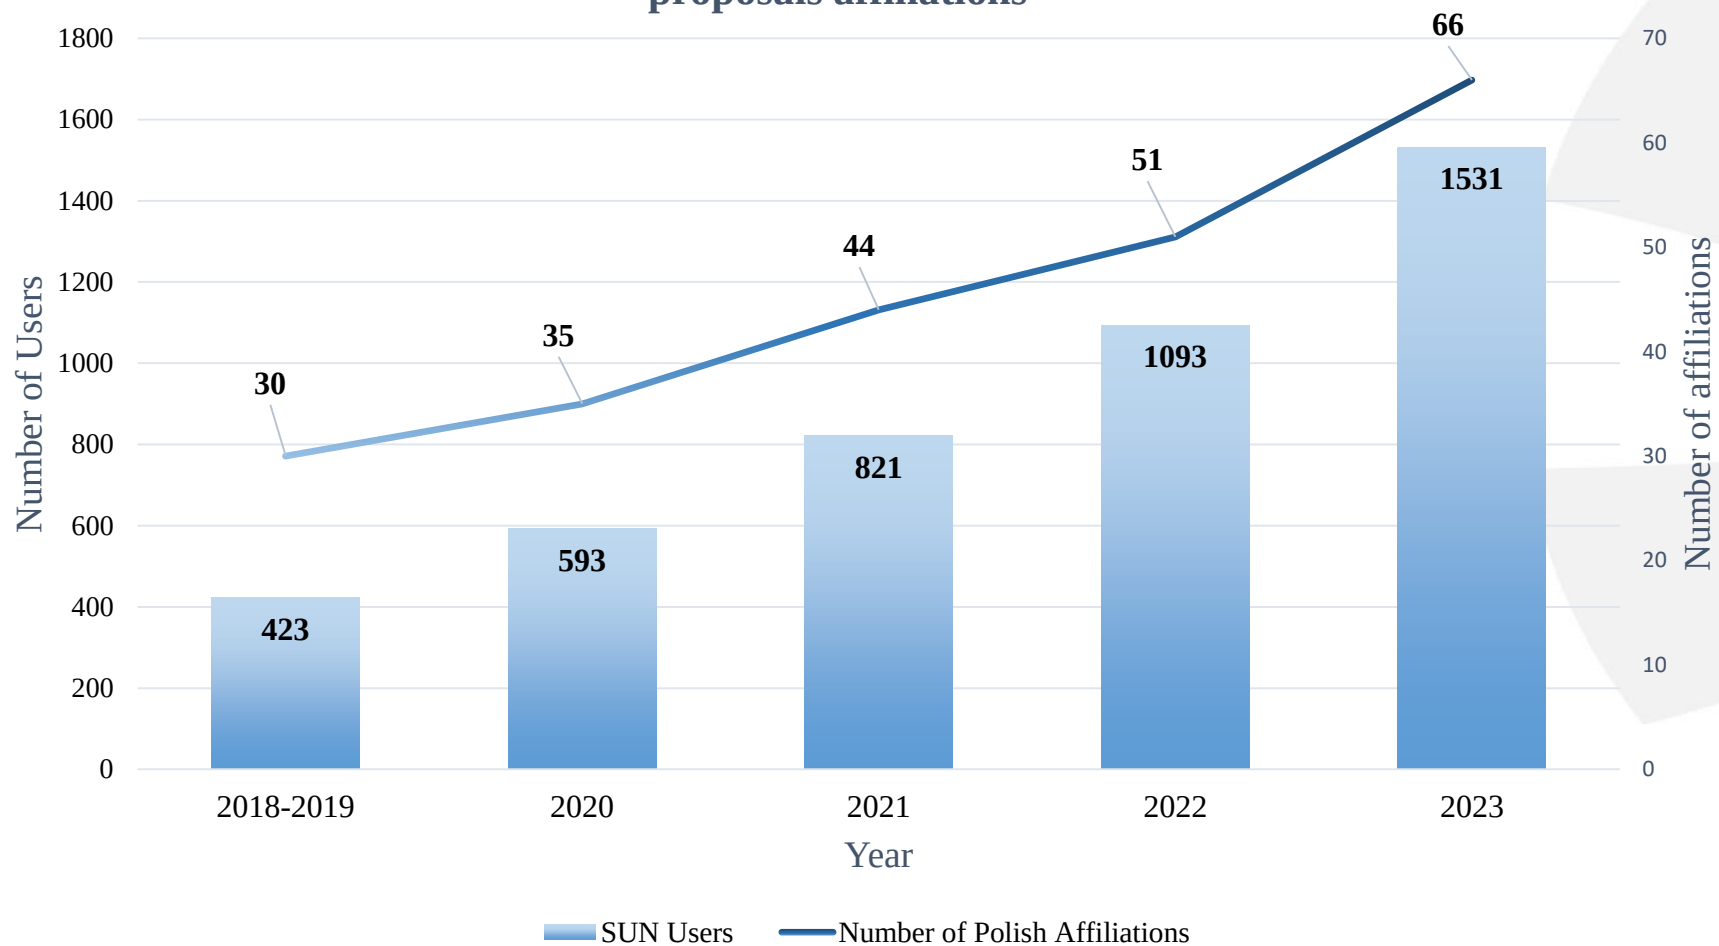

- Opened in 2015, first users in 2018

Submitted vs accepted proposals

- Opened in 2015, first users in 2018

Number of users and polish proposals affiliations

SOLARIS User Office's tasks

- Proposal submission – evaluation – visit – report
- Facility access
- Administrating SUN
- User meeting organization
- Gathering publications, masters theses, PhD theses etc.
- Organizing guided visits
- Reporting
- Developing, Communicating and Educating about new procedures

Workingaround not fully developed
User Office system.

Industry users not respecting the
deadlines.

Workingaround not fully developed
User Office system.

Working around with not fully developed
User Office system.

Working around with not fully developed
User Office system.

The SUN system is fully functional except
for:
Scheduling system,

Collaborating groups sample safety,

Mailing system,

Statistics and data module,

...

Working around with not fully developed
User Office system.

The solution?

Prioritization

A coordinator setting the schedule of the
development tasks

Outside of the User Office but aware of it's
needs

Outside of the developer's group but aware of
their capabilities

Industry users not respecting the deadlines.

Experiments scheduled 1 day in advance.

Loss of taxpayers' money in case of denying the experiment time.

Thank you!
